

For peat's sake stop the burn

Pledge of support

Our upland peatlands are precious and need protection from burning now.

Burning on deep peat has a negative effect on:

- Carbon stores
- Water quality
- Many peatland plants and other wildlife

I/we would like to see an immediate end to the burning of deep peat and want Natural England to act on its own evidence and stop the practice.

The only instance in which burning on deep peat is acceptable is when it is the only practical way to prevent the risk of wildfire.
